

Inscriber CG·Xtreme™

Inscriber CG·Xtreme integrates a broadcast-quality character generator with a versatile Animation module and a powerful Event Sequencer to deliver serious creative power for unbeatable value. With CG·Xtreme, artists can generate, sequence and play out sizzling titles and graphics with sophisticated motion effects. And CG·Xtreme's intuitive interface makes it easy to optimize your output, tackle more projects and ultimately attract more viewers with flawless graphics and titles.

Create Professional Titles with Powerful Effects

CG·Xtreme gives operators immense control over text output. With flexible text styles, motion effects, a comprehensive selection of TrueType fonts and extensive text handling power, your titles will look incredible. CG·Xtreme is also a time saving application that will accelerate your production by offering you a wide selection of preset Text Styles. Text styles come with attributes applied for stylish effects. However, if you want to create your own particular in-house designs, all preset Text Styles are editable in everyway – from the size, to the colour of the edge, to the angle of the shadow. In addition, you can import, resize and treat logos with text attributes, like shadow and tint. And with unlimited

CG layers, you can incorporate as many lines of text or as many graphics as you need.

Fly Text and Graphic Objects in 3D Space

CG·Xtreme's animation component is the key to providing your viewers with dynamic content. CG·Xtreme equips you with powerful animation tools that will (literally) take your layouts in new directions. With CG·Xtreme, you can easily create individually animated characters that look uniform and professional and can move each character independently. CG·Xtreme also includes time saving stagger functions that simplify working with individually animated characters.

In CG·Xtreme you can keyframe objects in 3D space, and additional Motion Filters provide you with popular effects such as blur and transparency over time. But what sets CG·Xtreme apart from other character generators is its comprehensive library of animation templates. With complete control over motion paths, position, orientation, spin and offset, you can determine every aspect of your animation and modify templates to create unique layouts more efficiently. You can also use CG·Xtreme's helpful preset animation paths to build complex and varied animations with minimal effort. However, if you're a do-it-yourself kind of artist, all of CG·Xtreme's powerful graphics tools can be used to build totally original animations from scratch.

Sequence and Play Out CG Layouts Instantaneously

The CG·Xtreme sequencer plays out your graphics with the precision and speed required for on-air broadcasting. Split-second display capabilities mean operators can organize and send CG layouts to air instantaneously. And the sequencer supports a wide variety of transitions and triggers to suit any

broadcast situation. CG·Xtreme's intuitive sequencing tools streamline graphics programming for smoother on-air delivery.

CG·Xtreme combines powerful time saving tools with advanced functionality so that you can create compelling broadcast graphics and titles with minimal effort. So go ahead, optimize your output with Inscriber CG·Xtreme.

CG·Xtreme is also available as an Inscriber **LIVE!**System or a Value Pro Workstation. Inscriber **LIVE!**CGX is a broadcast-ready professional solution that requires no system configuration or additional hardware. Value Pro CG·Xtreme is a high quality, PC-based, desktop computer system that offers the best price-performance ratio in the industry.

ODBC Option

Connect your Inscriber layouts to data in ODBC compliant files, such as Microsoft Access® or Excel®.

Active Texture Option

Add motion video as a texture on backgrounds, text or graphics.
