

Inscriber VideoCarte™

No Compromises—The Highest Quality and the Best Price.

Inscriber VideoCarte is a digital store that does not ask you to make compromises. Reliable on-air delivery of stills, clips, logos and image files does not have to mean a compromise between quality and affordability. You can have a flexible, open-system based, unlimited store with database management capabilities that keeps resources organized and ready for playback at any time. Inscriber VideoCarte is the best digital store investment you can make.

Integrated Store and Browser for Ultra-Fast Output

An integrated Store and Browser means you can have instant access to new resources. The Browser is completely dynamic. As files are updated in the Store, the Browser thumbnail views are refreshed in realtime. Even across a network, you have access to the most current resources—all the time. The intuitive thumbnail browser makes accessing a complicated and constantly changing database of files fast and convenient.

Realtime Retrieval and Delivery

The most important thing about your broadcast is getting the right information to air at the right time. You have thousands of hours invested in scores of CG layouts, still images

and 3D animations. With realtime retrieval, you can deliver seamless output. When you select a resource from your store it is instantly placed in the sequencer. When you hit take, that image, clip, avi or layout is presented to thousands of viewers. This is the power you need to feel confident that your broadcast is exactly what you envisioned. No one has time to waste, and VideoCarte can accelerate your workflow when you are on-air.

Complex Resource Management Made Simple

Whether you have 200, 10,000 or 40,000 files to sift through, the intuitive interface, with thumbnail display, will make finding what you need simple. With advanced search capabilities that allow you to mark, manage, sort and ultimately find the exact file you are looking for at the touch of a button, countless files won't seem like a logistical nightmare. For files you access all the time, users can customize Folios for quick desktop retrieval, or Folios can be set up for particular departments, projects or programs. With VideoCarte the functionality doesn't end with management and retrieval. VideoCarte can capture frames or even video to add to your database. Keep your store of resources current with easy access to Internet images, local files and network resources. When you have multiple users, and thousands of files, sometimes all that stands between absolute chaos and smooth delivery is the resource management power of Inscriber VideoCarte.

An Open Integrated Solution

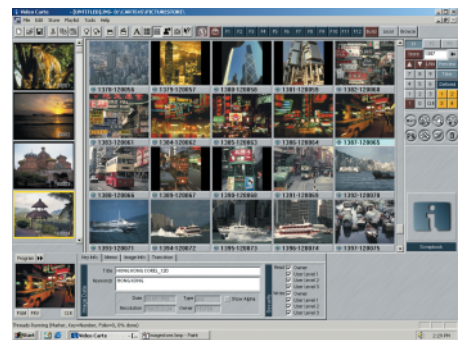

The open architecture of VideoCarte means that it naturally supports multiple file types. In addition VideoCarte integrates with Inscriber CG-Xtreme and CG-Supreme. Use lower thirds,

rolls, crawls, stills and animations you've created in an Inscriber Character Generator and use the VideoCarte Sequencer to send it to air. Separating your output engine from your graphics creation can streamline workflow and result in a more cost effective broadcast solution.

Additional Features

- Supports Windows 2000 and NT
- NTSC/PAL output
- Framegrab
- Serial Port Trigger for random or sequential event recall
- Expandable storage
- Event sequencer with full transition control
- Multi-user network support
